

Paragon Wireless Active Server™

Powerful Hosted Business Solutions

Intelligent Airwave's patent pending Paragon Mobile Platform™ technology with the Paragon Wireless Active Server™ empowers your business. Conveniently connecting your company, customers and the critical business data used to make decisions with wireless devices and email.

Features

The off-site hosted Paragon Wireless Active Server™ enables businesses to easily deliver enterprise data to customers and employees. The intelligent Monitor, Alert, and Broadcast Agents work together to watch, analyze, and disseminate the critical business information needed to make key decisions, quickly and affordably, and with no integration hassles.

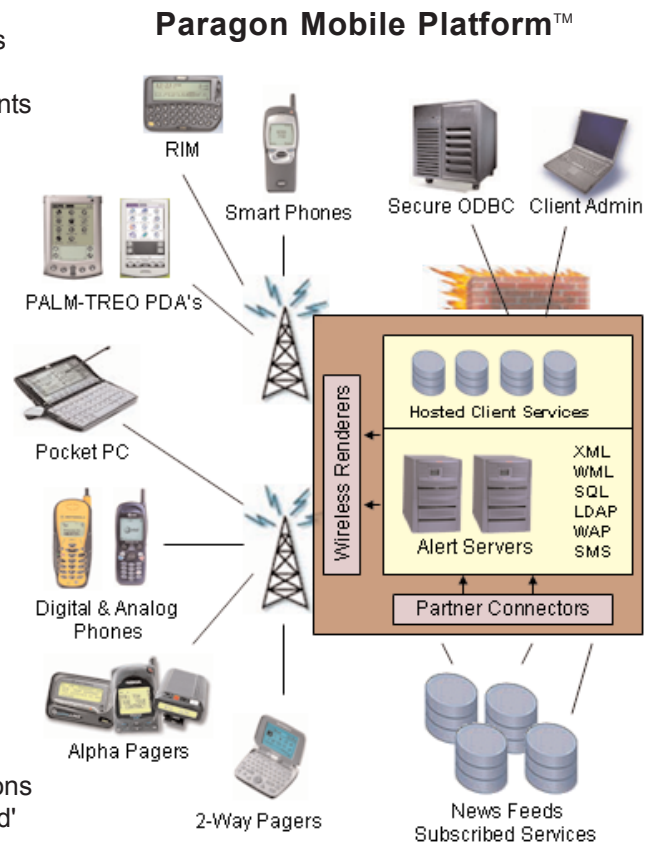

The alerts can be broadcast over a variety of popular devices including smart cell phones, pagers, Palm, Handspring and other PDA's, as well as email. The server can automatically send message alerts to an individual or a specified group. You can even specify which device to send the message to, based on custom criteria. The choice is yours.

The Paragon Mobile Platform™ currently broadcasts messages to over 120 countries. So whether your customers are local, scattered across the U.S. or around the world, the alert process helps to improve service, increase sales and enhance value to your business.

Benefits

Intelligent Airwave's Wireless Active Server with the Paragon Mobile Platform™ provides hosted mobile message applications without integration worries. Applications that extend the 'wired' boundaries of business, leverage your mobile work force, increase productivity and lower costs. Quickly, simply, and affordably.

If you are ready to add wireless messaging to the palette of tools used to conduct your business, discover the power and flexibility of the Paragon Mobile Platform™.

Empower your wireless device with the Paragon Mobile Platform™ - Only from Intelligent Airwave.
