

Paragon Wireless Business Server™

Powerful Business Solutions

Intelligent Airwave's patent pending Paragon Mobile Platform™ technology with the Paragon Wireless Business Server™ is a powerful new way to uniquely connect mobile wireless users and their critical business data, with wireless devices and email.

Features

The Paragon Wireless Business Server™ enables your business to alert your customers and employees, with custom information, specified by you, such as appointments, service request and sales leads. The intelligent Monitor, Alert, and Broadcast Agents work together to watch, analyze, and disseminate the critical business information needed to make key decisions, quickly and affordably.

The alerts can be broadcast over a variety of popular devices including smart cell phones, pagers, Palm, Handspring and other PDA's, as well as email. You can automatically send message alerts to an individual or a specified group. You can even specify which device to send the message to, based on custom criteria. The choice is yours.

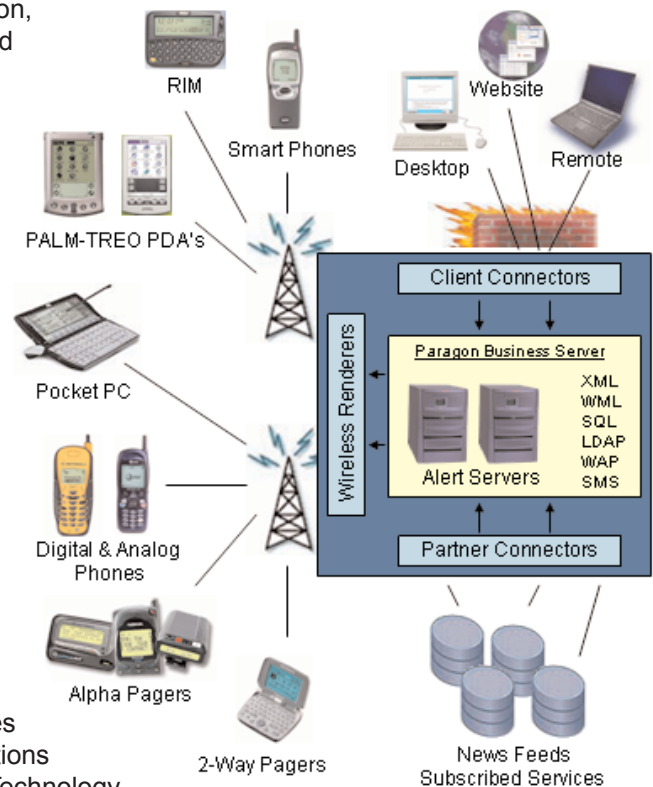

The Paragon Mobile Platform™ currently broadcasts messages to over 120 countries. So whether your customers are local, scattered across the U.S. or around the world, the alert process helps to improve service, increase sales and enhance value to your business.

Benefits

Intelligent Airwave's mobile messaging product suite enables rapid implementation of real world mobile message applications that extend the traditional 'wired' boundaries of business. Technology that leverages the flexibility of the mobile work force, fostering increased productivity while lowering costs.

If you are ready to add wireless messaging to the palette of tools used to conduct your business, discover the power and flexibility of the Paragon Mobile Platform™

Paragon Mobile Platform™

Empower your wireless device with the Paragon Mobile Platform™ - Only from Intelligent Airwave.
